SUMMARY

Frontend Software Engineer building production ERP, fintech and e-commerce interfaces with **React, TypeScript and React Native**. Ships multi-module business platforms on a feature-based architecture — shared component systems, typed API layers, cached data flows and full **Arabic/English RTL** support. Comfortable extending into **Node.js/Express** when a feature needs it.

EXPERIENCE

Frontend Developer

May 2026 – Present

ADEX

Jordan | Remote

- Architected the frontend of a **13-module enterprise ERP** — invoices, purchase orders, payments, manufacturers, customers, partners, accounts and financial reporting — where every feature slice owns its API layer, screens and state on top of one shared generic core.
- Built a reusable **component and CRUD foundation** of 58 shared components (data tables, form wrappers, validation, filtering, pagination), bringing the cost of a new module down from 2–3 days to under one.
- Integrated **63 typed REST endpoints** through Axios and TanStack Query, with cached reads, optimistic updates and one consistent error-handling path across every module.
- Delivered **role-based access control** with permission-gated navigation, alongside PDF and Excel document export and barcode/QR scanning for warehouse workflows.
- Implemented **Arabic/English localization with full RTL support** across 19 translation namespaces, so every screen mirrors correctly without a second set of styles.
- Engineered an **image-based product configurator** using layered SVG with clip-path masking — 7 customizable garment parts across 5 surface views, with real-time colour, material, logo and text preview.
- Shipped a **12-module restaurant admin dashboard** covering orders, subscriptions, delivery, menu management, promotions and finance.

Frontend Developer Trainee

Feb 2026 – May 2026

Madkhol Capital

Egypt | Hybrid

- Contributed production features to **three fintech applications** — two React web dashboards and one React Native mobile app — inside an established scalable frontend architecture.
- Implemented responsive, reusable **UI components** shared across both web dashboards, prioritising render performance and long-term maintainability.
- Integrated REST APIs and triaged live production issues through **Sentry**, diagnosing reported errors and improving release stability.
- Reviewed pull requests and worked in **Agile** cycles, helping keep code quality consistent through iterative delivery.

Mandatory Military Service

Aug 2024 – Dec 2025

Egyptian Armed Forces

Egypt

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend: React, Next.js, React Native, Tailwind CSS, Radix UI / shadcn, Vite

State & Data: TanStack Query, TanStack Table, Zustand, Redux Toolkit, Axios, REST APIs

Forms & Validation: React Hook Form, Zod

Testing: Playwright, Vitest, React Testing Library

Internationalization: i18next, react-i18next, RTL / bidirectional layouts

Backend & Databases: Node.js, Express.js, MongoDB, PostgreSQL

Tooling: Git, GitHub, Biome, ESLint, Husky, Postman, Sentry, Vercel, Android Studio

Spoken: Arabic (Native), English (Professional Working Proficiency)

PROJECTS

E-Commerce Web App | *React, TypeScript, Redux Toolkit* | [Live](#) · [Code](#)

Jan 2026 – Feb 2026

- Built a fully responsive storefront with product listing, category filtering and dynamic cart management, modelling global state as typed **Redux Toolkit** slices.

Social Platform (Full-Stack) | *MongoDB, Express.js, React, Node.js* | [Code](#)

Sep 2025 – Oct 2025

- Developed a full-stack social application with posts, likes, comments and a follow graph, designing the **REST API** in Express with JWT authentication and middleware-based authorization.

EDUCATION

Mansoura University

Sep 2020 – Jul 2024

B.Sc. Computer and Information Science — Software Engineering

GPA: 3.22 / 4.0

HONORS & AWARDS

2nd Place, Egyptian Startup Olympics — Student Path

Jul 2024

Innovation Support Fund (ISF), Egypt — placed second nationally and received 25,000 EGP in innovation funding for **Ecomate**, a sustainability startup, judged on technical innovation and market potential.

Venture Progress Pitch Winner

May 2024

USAID Scholars Program, AUC — won a competitive startup pitch and a 25,000 EGP seed grant for Ecomate, judged on innovation and environmental impact.

CERTIFICATIONS

Full Stack Development — Consulting of Computer and Information Center

Sep 2023 – Nov 2024

Frontend Development — Consulting of Computer and Information Center

Sep 2022 – Oct 2022
